Backlit film is a material upon which graphics or text can be imprinted so that when light shines through from behind, the design lights up. This is an incredible choice for windows or backlit light boxes.

A translucent matt faced polyester film used for excellent, high intensity colour prints and especially for illuminated media. Compatible with all inkjet printers and laser copiers.

Ideal for all customers using illuminated LED window display systems.

How to print using this product
It is recommended to print on the matt side for both inkjet and laser printers.

If the print result is not of good enough quality then try printing a sample on the glossy side.

When printing on the glossy side please remember to select 'Glossy Paper' or 'Transparency' in your computers print dialogue box
